CSINET

Dynamic Solutions. Superior Results.

CSINET

From smartphones to home appliances, seemingly everything we use in our personal lives depends on the internet. It's no different for financial institutions that also rely on connectivity to complete transactions, process data and deliver the type of experience today's consumer expects.

So why trust one of your most important utilities to an internet service provider (ISP) that doesn't understand how financial institutions work?

This question fueled CSI's development of CSINet, a robust internet platform—built and deployed on our enterprise-level secure infrastructure—to serve the specific needs of financial institutions. CSINet gives you comprehensive, secure and scalable internet service without the financial and personnel overhead associated with management.

ADDITIONAL SECURITY BENEFITS

The security of your institution is critical, that's why every CSINet environment is shielded by multiple layers of security, including:

- Customizable Content Filtering
- Traffic Replay and Monitoring
- Proxied Connections
- Enhanced Firewall Service
- Intrusion Prevention System (IPS)
- Network-Based Malware Protection
- Distributed Denial of Service (DDoS) Protection

Why trust one of your most important utilities to an ISP that doesn't understand how financial institutions work?

NOT YOUR TRADITIONAL ISP

Here are a few reasons why choosing CSINet as your financial institution's ISP makes sense:

- **REDUCED COSTS:**
We administer the service, manage its security and monitor threats for you
- **UNLIMITED GROWTH:**
Our infrastructure allows CSINet to grow along with your institution
- **IT'S ALWAYS AVAILABLE:**
Built-in redundancy and availability controls make CSINet available anywhere site connectivity is provided
- **EVERYTHING'S INCLUDED:**
All features and functionality come standard, eliminating the need to use different services from, and conduct due diligence on, multiple vendors
- **A TEAM EFFORT:**
We actively participate in the cybersecurity community to remain on top of the latest security definitions and trends
- **THE HUMAN ELEMENT:**
You'll work with CSI technicians who understand your institution's specific needs, as opposed to getting lost in the shuffle with other ISPs

CSI also conducts regular penetration testing on our environments, which saves you the burden (and costs) of having to perform your own penetration tests.

With CSINet, you get cutting-edge performance, best-in-class security and personalized service from an experienced technology provider that specializes in making financial institutions more competitive, compliant and profitable.
