

# CSI SIEM-as-a-Service

Real-Time Incident Response | 24x7 Monitoring | Threat Detection

## Enhance Cybersecurity with Real-Time Monitoring

Cybersecurity threats and infrastructure vulnerabilities continue to evolve, requiring heightened log monitoring of devices throughout your network to detect and remediate security events.

With real-time incident response and continuous monitoring, Security Information and Event Management-as-a-Service (SIEMaaS) technology mitigates cybersecurity risks, ensures compliance and optimizes your IT budget.

## Monitor and Manage Cybersecurity Threats

Our SIEM service collects and reviews the event logs for connected devices across a technology environment, detecting anomalies and alerting on them in real time.

Since CSI SIEMaaS is powered by our 24/7 security operations center (SOC), our experts analyze attacks in the entire environment and respond to any detected network threats or vulnerabilities as they occur.

CSI SIEMaaS provides unmatched insight and control of security threats by:

- Monitoring logs around the clock
- Detecting security breaches across all devices connected to the network
- Delivering real-time incident response and remediation

- Eliminating false positives and investigating threat anomalies
- Relying on a dedicated team of CSI experts to manage security attacks

## SIEMaaS: Your Platform for Advanced Protection

CSI SIEMaaS enhances defenses against internal and external threats by providing a more holistic analysis of attacks in your environment. It includes:

- Broad device support
- Dashboard access to all logs
- A scalable service model
- Customized reports to meet FFIEC requirements
