# ENSURE THE SAFETY & INTEGRITY OF YOUR INSTITUTION'S CRITICAL ASSETS

## CSI'S SECURITY SUITE SAFEGUARDS YOUR SYSTEMS, DATA & APPLICATIONS WITH BEST-IN-CLASS DEFENSES

---

Your IT security is a top priority at all times, both day and night. And the variety and maliciousness of cybersecurity threats targeting the financial industry have dramatically increased in recent years. Maintaining end-to-end IT security requires full-time focus and dedication, and for many financial institutions, tackling these daunting security obstacles is too difficult to face alone.

WHETHER THROUGH FULLY MANAGED SECURITY SERVICES THAT SAFEGUARD YOUR  
INSTITUTION 24X7, OR SOLUTIONS TO PROTECT YOUR MOBILE DEVICES,  
**CSI IS YOUR PARTNER IN PROTECTING YOUR INSTITUTION AND YOUR CUSTOMERS.**

CSI understands the threats you are up against every day. We implement specific protocols specifically for financial institutions that create a highly secure and responsive IT environment throughout your entire institution, not just your perimeter. Our solutions range from industry-leading security threat monitoring to mobile device security, allowing you to strengthen your defenses to better protect your data, institution and customers.

CSI Security Suite services deliver the following key advantages:

- Achieve cost and resource efficiencies
- Capitalize on redundancies and multi-layer security controls
- Get access to both a technology platform and security services that are audited and stringently tested
- Gain support from our deep bench of certified security experts
- Receive real-time monitoring, alerts and support 24x7

## SECURITY SUITE

Stringent protection for your financial institution's safety and compliance

CSI delivers security services that mitigate risk through an integrated end-to-end platform to monitor, analyze and manage the security of your entire environment. With this service, you can safeguard against sophisticated attacks, utilizing protection designed for the threats that target financial institutions.

Beyond industry-leading technology, our redundant network operations centers (NOC) and deep bench of security experts provide round-the-clock support, monitoring network activity, proactively reporting potential vulnerabilities, providing recommendations to improve your security posture and ensuring your team is positioned to excel in your next compliance audit.

CSI's Security Suite is available through flexible service levels customized to you, for either Managed Security or Monitored Security. Choose full-service managed security, or leverage our NOC to monitor your security and provide staff with alerts to manage your environment.

- Gain 24x7 end-to-end monitoring and mitigation performed by industry experts and certified professionals in redundant network operations centers
- Ensure your systems are patched, protected and monitored so that threats are prevented and mitigated
- Leverage real-time reporting to streamline audits and examinations
- Rest assured that you're working with a financially stable partner that's as stringently tested as you are, including third-party and internal audits

Through our security services, your mission-critical servers, applications, network and security devices are protected by the following:

- 24x7 Correlated Log Monitoring and Management
- 24x7 Threat Mitigation
- Firewalls
- Intrusion Prevention

Take advantage of many industry-leading security solutions from CSI, including:

- **ZERO-DAY THREAT PROTECTION:** Safeguards your critical servers with comprehensive protection against zero-day and targeted attacks using policy-based controls and a combination of host-based intrusion detection and intrusion prevention.
- **END-POINT PROTECTION:** Secures lower-risk servers and workstations, both physical and virtual, with multiple layers of defense, including anti-virus/anti-spyware, application and device control, focused intrusion prevention, firewall and browser protection, and location awareness.
- **SECURE MOBILE DEVICE MANAGEMENT:** Ensures the security of such mobile devices as smartphones and tablets with 24x7 remote device management, encryption, remote lock, password enforcement, monthly reports and remote wipe.
- **VULNERABILITY SCANNING:** Detects any areas of weakness with scheduled analysis of networks and applications for vulnerabilities.
- **CONTENT FILTERING** Prevents users from viewing websites or content that is defined as inappropriate.
- **CORRELATED LOG MANAGEMENT/SIEM:** Delivers simplified compliance reporting and enhanced security by collecting, storing and reporting on security event data (security incident and event management).
- **FULL-DISK ENCRYPTION:** Ensures that only authorized users can access data on your computers through pre-boot authentication.
