CSI User Access Reporting

Streamline Review | Audit & Exam Documentation | Program Tracking

Enhance Your User Access Reviews with Confidence

It's often difficult for an institution's in-house staff to manage all aspects of security and compliance, including preparing for upcoming exams and audits, implementing proper controls and keeping up with user access.

For many institutions, user access review is a cumbersome, time-consuming and manual process. To simplify it, CSI's User Access Reporting solution validates your users' level of permissions for various systems, helping you mitigate cybersecurity risk and comply with regulatory requirements.

Streamline Your User Access Reviews

User access reviews are critical to maintaining a healthy security program and meeting regulatory requirements. In fact, examiners expect institutions to complete these reviews regularly and ensure that employees and third-party vendors have the minimum access required to perform their specific job functions.

As a critical component of your institution's cybersecurity program, CSI User Access Reporting streamlines the review process to help your institution manage cybersecurity risk, ensure compliance and maintain cyber insurance coverage. And the solution creates simplified, easy-to-understand reports through a consistent process.
